

Executive Summary – HR Analytics Dashboard

The HR Analytics Dashboard provides a comprehensive overview of workforce demographics, employee attrition, job satisfaction, and educational background, enabling HR leaders to make data-driven decisions and improve employee retention strategies.

Key Workforce Metrics

- **Total Employees:** 1,470
- **Active Employees:** 1,233
- **Employees Attrited:** 237
- **Attrition Rate:** 16.12%
- **Average Employee Age:** 37 years

Attrition Analysis

The organization has experienced an attrition rate of **16.12%**, with **237 employees leaving** the company. Department-wise analysis indicates that attrition is concentrated in specific business areas, highlighting the need for targeted retention initiatives.

Employee Demographics

The workforce is predominantly concentrated within the **25–44 age group**, representing the largest segment of employees. This indicates a strong mid-career workforce that forms the core operational strength of the organization. Employees above 55 years constitute the smallest workforce segment.

Education and Qualification Insights

Employees possess diverse educational backgrounds ranging from High School to Doctoral degrees. Analysis by education field reveals that attrition is highest among employees from:

- Life Sciences
- Medical
- Marketing
- Technical disciplines

These findings suggest opportunities to improve engagement and career development programs within these educational segments.

Job Satisfaction Analysis

The Job Satisfaction Rating matrix highlights varying satisfaction levels across different job roles. Roles such as:

- Sales Executive
- Research Scientist
- Laboratory Technician

represent significant portions of the workforce and demonstrate varying satisfaction patterns. Monitoring satisfaction trends within these roles can help reduce turnover and improve organizational performance.

Gender and Age-Based Attrition

Gender-based attrition analysis across age groups reveals:

- Higher attrition among younger employees, particularly in the **25–34 age category**.
- Attrition gradually decreases in older age groups.
- Certain age groups show noticeable gender disparities, indicating the need for tailored retention strategies.

Business Recommendations

1. Focus retention efforts on employees aged **25–34**, where attrition is highest.
2. Improve job satisfaction through career growth opportunities, recognition programs, and employee engagement initiatives.
3. Conduct department-specific attrition investigations to identify root causes.
4. Develop targeted retention programs for high-turnover educational fields.
5. Continuously monitor workforce satisfaction and demographic trends using HR analytics.

Conclusion

The dashboard highlights that while the organization maintains a strong workforce of **1,233 active employees**, attrition remains a critical challenge. By leveraging insights from employee demographics, job satisfaction, education, and attrition trends, management can implement proactive HR strategies that enhance employee retention, improve workplace satisfaction, and support long-term organizational growth.
